

# MacSema DownLoaders/Rechargers

## OVERVIEW

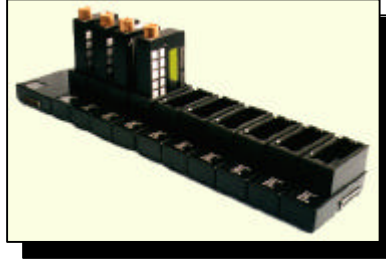

Micro DownLoader

Micro DownLoader

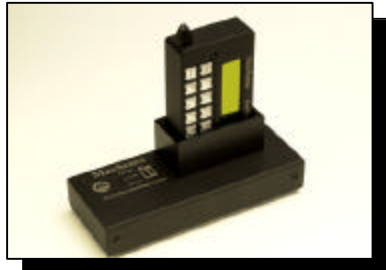

S-10 Recharger

Multi-Dock

Single-Station DownLoader

Single-Station DownLoader

MacSema provides a variety of cost effective systems to charge and download readers. From a single reader to applications with several hundred, MacSema has a solution to fit your requirements.

Charging and downloading single MacSema readers is easy using the **Single-Station DownLoader** or the **Micro DownLoader**. Both offer the ability to download the readers from a remote site without a PC. Charge and communication status lights offer user feed back. A serial cable connects the downloaders to a PC to download information and upload new programs to the reader. The Micro DownLoader offers a smaller footprint and less weight, but has the same capabilities of the Single-Station DownLoader.

When many readers are used at one site, the **Multi-Dock** is the answer. It is a flexible system that can charge and communicate with 1 to 256 readers from one PC! The programmable **Master** controls a bank of 1 to 16 **Mini-Docks**, each holding a reader. Each Master can be connected to up to 15 other Masters each containing up to 16 Mini-Docks. Add more Mini-Docks and Masters as your application grows. User's simply place their reader into a Mini Dock and walk away. The system can automatically download each reader, clear the information if desired, reprogram the reader at a designated time for another application and keep the readers charging until needed.

Charge up to 10 Series 2 readers at one time using the **S-10 Recharger**. This economical system charges any assortment of Series 2 readers.

## Charging and Communication Systems
